

Total Water Management Solutions®

Fountain Quail owns, operates and is developing an expanding portfolio of Class II Saltwater Disposal Wells to serve the Marcellus and Utica shale plays and the Mid-Continent's SCOOP and STACK plays. We are exploring the acquisition and greenfield development of additional facilities to serve other major plays across North America, with a focus on the Permian Basin.

Fountain Quail has been working with leading producers in major oil and gas plays across North America for more than 20 years. Services include treating for reuse and discharge, disposal, storage, hauling, and water sourcing and transfer.

CLASS II SWD WELLS

The EPA-preferred method for the disposal of produced and flowback water is through Class II Saltwater Disposal Wells. Fountain Quail owns, operates and is developing an expanding portfolio of Class II SWDs to serve the Marcellus and Utica shale plays and the Mid-Continent's SCOOP and STACK plays. We are exploring the acquisition and greenfield development of additional facilities to serve major plays across North America, with a focus on the Permian Basin.

Fountain Quail's Class II SWDs are designed, built, operated, and maintained according to best-in-class environmental, health and safety standards to protect underground sources of drinking water.

Fountain Quail's saltwater disposal facilities are the centerpiece of our Total Water Management Solutions® program. Our comprehensive water management products and services include treating for reuse and surface discharge, disposal, storage, hauling, and water sourcing and transfer.
